# INTRODUCTION

valve guides is a partial assembly. However, it is necessary to issue a new part number, 351 641 R94, which represents the foregoing with valves and springs added, and is a complete assembly. Component parts of assemblies are listed immediately following the assembly itself, excepting those made up of less than four parts, which are fully covered by description. Items consisting of two or more components not serviced separately are so supplied because disassembly of the components is considered impractical. In some cases the individual parts of an assembly are not available for service. Such parts are usually marked with the symbol §. In some instances, such individual parts are shown in the "List Unit" with a notation giving the part number which is to be used when ordering. For example: 356 302 R1 bearing (order 356 300 R91).

(5) **Abbreviations.** The abbreviations used in this catalog are explained in the list of abbreviations on page 6.

(6) **Index.** On pages 4 and 5 you will find an alphabetical index which is divided into five classifications: Engine, Electrical System, Chassis, Hydraulic System and Attachments. This index should be used to locate unit lists and illustrations. A numerical index at the back of the catalog contains a complete list of parts, showing the page numbers where each part is listed and described.

(7) **Standard Parts.** The so-called "hardware" items such as bolts, screws, nuts, etc., are in most cases indented and listed under the individual parts with which they are used. They should be ordered by number, description and size, as they are not component parts of the piece they attach. *Hardware parts having special part numbers are especially made for their location and should never be substituted with regular standard parts.*

(8) **Serial Numbers.** Engine serial numbers start with FCM 100 001 for the Super C. These are stamped on a pad on the right side of the engine crankcase above the crankcase breather. Chassis or tractor serial numbers start with FC-100 001 and are stamped on the name plate on the left side of the clutch housing. No attempt is made at the factory to have the engine and chassis serial numbers correspond. Customers should be urged to supply you with engine and tractor chassis serial numbers—including prefix and suffix letters—when ordering parts. A suffix letter code has been assigned to identify parts which replace standard parts or units when tractors have special features which differ from standard equipment. Full details concerning the suffix letter code may be found on page 219.

(9) **Prices.** Parts prices will be found in the CH-219 tractor and engine price list, which is issued separately and includes both current and obsolete parts.

This catalog contains a complete list of parts for the Farmall Super C tractor, with a 4-cylinder,  $3\frac{1}{8}$  x 4-inch (Gasoline, Distillate or Kerosene) engine. The parts in this catalog are grouped according to their location in the tractor. Each group is preceded by an "exploded view" which clearly illustrates each part in its correct relation to the other parts in the illustration. Following is a brief summary of the simplified system used in compiling this catalog. It is to your benefit to study this summary carefully.

(1) **Part Numbers.** Where part number suffix letters have been advanced, the new part will replace the old unless otherwise marked. For example: Valve lever bracket 45 036 DB will work for 45 036 D or DA.

(2) **Illustrations.** The "exploded views" of each unit show the individual parts clearly and in their normal relationship to one another. This illustration method makes it easy to locate parts, whether they are ordered by description or part number. Reference numbers only are shown in each illustration. Parts in the illustrations without reference numbers are the same as corresponding parts with reference numbers. These numbers correspond to those in the reference number column in the numerical list of parts which follows each "exploded view."

(3) **Method of Listing.** The parts list is divided into groups corresponding to units in the tractor. Large groups are subdivided into units. Parts are listed in reference number order with full descriptions, based upon the "noun first" method—i.e., the noun name of the part is listed first, then the modifying descriptive information which serves to specifically identify the item. A serial number is also given when needed for further identification. The right-hand column shows the quantity required per tractor. All parts for which no engine serial number is shown are used in the first engine of each type having serial No. 100 001 and are still current. Likewise, all parts for which no tractor serial number is shown are used in the first tractor having serial No. 100 001 and are still current.

(4) **Partial Assemblies and Complete Assemblies.** You will find that certain numbers are followed by the letters "X" or "Y". The suffix letter "X" is a symbol indicating an assembly of parts which may be either a partial or a complete assembly. You will also find some numbers are followed by the suffix R11 (one, one) through R89 (eight, nine) and R91 (nine, one) through R99 (nine, nine). The suffix R11 indicates an assembly of parts which may be either a partial or a complete assembly. (Comparable to the above system using "X.") The suffix R91, in nearly all cases, indicates a complete assembly. (Comparable to the above system using "Y.") For example: 261 295 R21 cylinder head with studs and

*It is the policy of International Harvester Company to improve its products whenever it is possible and practical to do so.*

*We reserve the right to make changes or add improvements in the design or construction of parts at any time without incurring the obligation to install such changes on Tractors previously delivered.*

## INSTRUCTIONS FOR ORDERING PARTS

- (a) All parts orders should be sent to the control district office or parts depot when so instructed. Give complete address, state the county and railroad station (when shipping point is different than post office), also whether shipment is to go by parcel post, express, truck, or freight.
- (b) When ordering parts, give the IH part number, including suffix or prefix letters. To facilitate identification of these parts, "Serial Numbers" assigned to machines, if any, should be furnished.
- (c) Parts should be ordered on the standard parts order blank. The parts should be arranged in sequence by part numbers to facilitate service on orders at the control district office or parts depot.
- (d) Claims for shortage or error in the handling of an order for parts must be made upon receipt of goods.

TC-44

MEMORANDA

A Suffix Letter Code, as outlined below, is added to the Chassis Serial Number as a means of identifying tractors with special features, thus facilitating servicing. This code applies primarily to special features that replace standard parts or units used internally but may also be used to identify tractors equipped with one of two or more optional parts wherein identification of said optional parts is deemed necessary to proper servicing. Each suffix letter used is stamped in the blank space following the serial number on the Chassis Serial Number Plate.

Attachments that do not effect replacement of standard parts or units have not been coded.

(Example: 100001BEJ represents a tractor with a 8000-Ft. High-Altitude Kerosene Burning Engine and Rockford Clutch.)

SUFFIX LETTER

SPECIAL FEATURES OR OPTIONAL PARTS

ON CHASSIS SERIAL NUMBER PLATE

A	DISTILLATE-BURNING ATTACHMENT
B	KEROSENE-BURNING ATTACHMENT
D	5000-FT. HIGH-ALTITUDE ATTACHMENT
E	8000-FT. HIGH-ALTITUDE ATTACHMENT
J	ROCKFORD CLUTCH
